

Group 27 Final Project Proposal

Paper: Learning Imbalanced Data with Beneficial Label Noise

Aimed Category: Excellent

Students:

- Matei Cananau
- Alexander Sjölander
- Gustaw Siedlarski

Does the proposal include all the required sections? Does it include all the required content in each section?

Yes

~~*If the answer is no to the two questions above, does it require resubmission? How? By when?*~~

Is the project proposal aligned with the aimed grade?

Yes, but the grading milestone should be updated, see comments below.

~~*If the project proposal goes beyond the aimed grade, why?*~~

~~*If the project proposal promises below the aimed grade, why?*~~

Is the project proposal computationally infeasible? How?

Yes

Additional Suggestions (Optional): do you have any additional suggestions when they design their experiments and/or evaluation or implement the project, or write their report?

Claims about the grading criteria for a satisfactory grade:

The paper's main contributions include work on **binary** and **multi-class** problems. To get a satisfactory grade, we thus expect you to implement and run experiments on **both** binary and multi-class datasets (including **some baselines** and **the LNR method itself**).

The core of this project is that you are supposed to practice and learn the skills necessary for the re-implementation and possible extensions. Therefore, you should only pick a few of the KEEL datasets (~5) for the satisfactory grade category. Going from five to 32 datasets does not teach you anything, it just keeps you and your machines busy. Adding more datasets will generally not give you a better grade. However, if you very purposefully use more datasets to add comparisons, for example between datasets of different sizes or with different imbalance ratios, and do the corresponding analysis and discussion, this can be counted as a contribution that counts towards a better grade.

Using only a subset of the baseline methods is fine, too.

Bonus parts (Optional): What would count [as bonus](#) in their proposed plan?

Other notes (Optional): any other notes they should consider?
